

Normally if you want to use 2x monocular with 54X device, you have to take off riflescope clamping adapter from Dedal device and screw on the monocular. This is not practical and can make problems if you want fast change D54X device from monocular to rifle scope and vice versa.

Because of these reasons, we made reducing ring which is put on the Dedal 2x monocular and stays there. When you want to use D54X device with 2x monocular, just put it into standard clamping adapter, the same way as you connect D54X to your rifle scope.

Monocular reducing ring “AM-54X” is available in all sizes same as AD540 adapter, from 44 to 80 :
44, 46, 46.7, 48, 49, 50, 52, 54, 56, 56.7, 57, 58, 58.4, 62, 62.7, 64, 65, 80

Mounting procedure

*Step 1: Take off **original thread reducing ring** from Dedal monocular*

*Step 2: Screw on the right size **monocular reducing ring** “AM-54X” to the monocular*

*Step 3: Put the monocular into **AD540 (Rusan’s D54X clamping adapter)***
